Stap 3

Accepteer het mailtje in je eigen e-mail inbox

Stap 4

In de 'Welcome Guide' druk op de knop <Get Started>

The screenshot shows the Mailjet 'Welcome Guide' interface. On the left is a navigation menu with options like Dashboard, Welcome Guide, Campaigns, Content, Contacts, Automations, Forms, Pages, API, and Integrations. The main content area is titled 'Welcome Guide' and shows a progress bar at 1/4 completed. Under the 'Next up' section, there are four steps: 'Set up domain' (10 mins) with a red box around its 'Get started' button, 'Import contacts' (3 mins), 'Send a campaign' (5 mins), and 'Activate your account' (Completed). A user profile dropdown is visible in the top right corner.

Stap 5

Druk op de knop <Add domain>

Account > Domains and senders

Domains and senders

You can set up to 100 different sender addresses or domains to be used in the «from» field of your emails.

Domains and Sender Addresses SPF/DKIM Authentication Page Domains

Total declared senders 1 / 100
[Learn more about limits](#) 99 left

Domains

Validate your domain to send from any address tied to the domain without manual validation of each sender address. Once you have validated your domain, authenticate your domain to enhance your deliverability.

Add domain

Label	Domain	Status
-------	--------	--------

Stap 5

Vul je eigen domein in van waar de mails verstuurd moeten worden

Add a new domain

To validate your domain you will need access to your website hosting provider or your DNS records through your domain registrar.

Please note that to validate a domain, you need to have access to your website hosting or your domain registration account.

Domain	Label
<input type="text" value="webwonders.nl"/>	<input type="text" value="Webwonders website"/>

Stap 6

Ga vervolgens naar: <https://app.mailjet.com/account/relay>

Stap 7

Kopieer de gegevens bij 'Create a DNS record' in een nieuw mailtje om later naar Webwonders te sturen.

Option 2: Create a DNS record

After accessing your DNS records for your domain, create a TXT record with the following value. For more details assistance in adding a TXT record, [learn more](#).

Host

webwonders.nl

Value

Stap 8

Druk bij 'Configuration' op <See all API credentials>

Account > SMTP and SEND API settings

Configuration

Send your transactional emails or marketing campaigns through our API or SMTP relay. Find all the data is below and get started in just few minutes.

Credentials (API and SMTP)

Primary API Key	API Key	Secret Key
Main account	5d5b*****	Not generated

[See all API credentials](#)

Configuration (SMTP only)

SMTP server
in-v3.mailjet.com

Use TLS
optional

Port
25 or 587 (some providers block port 25)

If TLS on port 587 doesn't work, try using port 465 and/or using SSL instead.

Your online templates library in our Email Editor

You can design and manage all your transactional templates in our Email Editor, our email design tool. All gathered in one single library, your templates can be sent easily through our SMTP or Send API thanks to their unique ID.

[Design a template](#)

Context aware messages

With our templating language you can create emails with adaptative content and layout that suit each contact and transactional message.

[Try it now](#)

Stap 9

Druk op <Generate Secret Key>

Primary API Key

Main account	API KEY	SECRET KEY	Generate Secret Key
	5d5b*****	Not generated	

Stap 10

Kopieer beide keys en kopieer ze naar het eerder gemaakte mailtje.

Let op: deze zijn maar eenmalig zichtbaar

Stap 11

Stuur de gemaakte mail naar je contactpersoon bij Webwonders:

<naam>@webwonders.nl

New Primary API Key

This Secret Key is displayed only once (now) for added security. Please copy your Secret Key and keep it somewhere safe and accessible. Note: You will be able to reset your Secret Key if needed.
